BEM

BEM

- What is BEM :

1. BEM (Block Element Modifier).
2. Is a methodology or naming convention used in web development to create a clear and maintainable structure for class names in HTML and CSS.
3. BEM helps developers organize and style their code in a modular and predictable way.

```css
// _nav.css

.nav__link {}
.nav__link--dark {}
.nav--dark {}
```

```scss
// _nav.scss

.nav {
    &__link {
        &--big {}
    }
    &--dark {}
}
```
